Leveraging Advanced Prebid Analytics to Boost Programmatic Revenue

Prebid has become an essential tool for publishers aiming to maximize revenue through programmatic advertising. By enabling header bidding, Prebid allows multiple buyers to bid on ad inventory simultaneously, ensuring that publishers get the highest possible revenue for their ad spaces.

With an advanced revenue analytics platform, publishers gain access to comprehensive Prebid Analytics in real-time and on a single view, providing critical metrics for optimizing the setup and performance of [Prebid](#) on their websites.

How does Prebid Work?

Integration and Auction Process

[Prebid](#) works by integrating [Prebid.js](#) into a publisher's website. This integration allows the Prebid library to run before the ad server, initiating a real-time auction when a user visits the site. Here's a breakdown of how Prebid operates:

1. **Integration:** The Prebid.js library is embedded into the website's header. This setup ensures that Prebid can operate before any ad server interaction, setting the stage for the auction process.
2. **Auction:** Upon a user's visit, Prebid.js sends bid requests to various demand partners, including ad exchanges and Supply-Side Platforms (SSPs).
3. **Bid Collection:** Demand partners respond with bids for the ad inventory, which Prebid collects and processes.
4. **Ad Server Communication:** The highest bid is sent to the publisher's ad server—such as Google Ad Manager—where it competes with other programmatic demand sources like AdX and Amazon TAM.
5. **Ad Decisioning:** The ad server evaluates the Prebid bid against other programmatic bids, ensuring that the highest bid wins.
6. **Ad Display:** Finally, the ad with the highest bid is displayed on the publisher's site, optimizing the revenue potential.

For publishers to optimize this process, it's vital to track and analyze these interactions using [comprehensive analytics platforms](#). Through such platforms, publishers can gain critical insights into how their Prebid setup performs and make data-driven decisions to boost revenue.

How to Monitor Prebid Bidders to Ensure Good Performance?

To effectively monitor and optimize Prebid performance, publishers need to leverage specific dashboards and alert systems. These tools provide granular insights into the metrics that matter most, such as bid rate, win rate, and timeout rates.

The effectiveness of Prebid Bidders – in terms of bid rate, timeouts, and win rate – is easily tracked using this dashboard present in AY platforms. The data used to create these sets in the dashboard below is sampled. It's collected auction information on Assertive Yield's client and used to analyze the

Most partners don't participate in every auction during a session. Publishers can use the information from this dashboard to track and analyze how often and for which inventory bidders return a bid on average per auction in a historical manner.

1. Prebid Overview Dashboard

The Prebid Overview Dashboard offers a comprehensive view of all key metrics, allowing publishers to assess overall performance at a glance. This dashboard includes data on bid rates, win rates, and timeout rates for different devices and demand partners. For example, you can use the Prebid Analytics Real-Time Alert template to get updates whenever there is a significant change in bidder performance.

2. Prebid Analytics by Bidder

This dashboard breaks down performance by individual bidders, providing insights into which demand sources are contributing the most to your revenue. It's essential to continuously evaluate these metrics to identify underperforming sources and make adjustments as needed.

By using the Bid Performance by Prebid Partner Dashboard, publishers can track the highest bidders and analyze their effectiveness in winning ad inventory.

3. Bid and Win Rate Dashboards

Understanding and optimizing bid and win rates are critical for maximizing ad revenue. The Bid Rate represents the percentage of ad requests that receive bids, while the Win Rate indicates the percentage of those bids that win the auction. A high bid rate combined with a high win rate usually translates to increased revenue.

How to Monitor Bid and Win Rates:

- **Floor Price Adjustments:** Regularly tweak floor prices to strike the right balance between bid and win rates.
- **Demand Source Evaluation:** Continuously assess the performance of demand sources and remove those that underperform.

Timeout rates by timeouts Dashboard

4. Timeout and Response Time Dashboards

Timeouts are another critical factor that can significantly impact revenue. The Timeout Rates by Device Dashboard provides insights into how different devices and partners perform in terms of response times. By analyzing these metrics, publishers can adjust timeouts to capture more bids and reduce missed opportunities.

5. Set Prebid Performance Real-Time Alert

This alert gives an update when there is a drop in revenue for any prebid bidder.

The screenshot shows a web form for configuring an alert. The form is organized into several sections:
1. **Name**: A text input field containing "Playbook: Bidder's Revenue performance".
2. **ID**: A text input field containing "Alert ID".
3. **Description**: A text area containing "This alert gives an update when there is a drop in revenue for any prebid bidder".
4. **Target Type**: A dropdown menu set to "Organizations".
5. **Targets to Check**: A dropdown menu set to "Organizations".
6. **Type**: A dropdown menu set to "Yield".
7. **Metric**: A dropdown menu set to "PB Revenue".
8. **Dimensions**: A dropdown menu set to "Winning Bidder".
9. **Trigger**: A section with "Operator" set to "Decrease", "by" set to "% 70", "Level" set to "Warning", and a "Remove" button.
10. **Filter**: A dropdown menu set to "Add Filter".
11. **Notification Groups**: A dropdown menu set to "Notification Groups".
At the bottom of the form are two buttons: "Add Alert" (blue) and "Reset Form" (orange).

Advanced Analytics: Bid Landscape and Performance

Bid Landscape by Partner

This dashboard provides a detailed view of the distribution of bids across different price ranges, offering valuable insights into the competitiveness of your ad inventory. By analyzing the bid landscape, publishers can set appropriate floors for different SSPs, ensuring that their inventory is sold at a competitive price.

Bid Landscape by partner & Win Landscape by partner Dashboard

Conclusion: Optimizing Prebid for Revenue Growth

In today's competitive programmatic advertising landscape, simply implementing Prebid is not enough. To truly maximize revenue, publishers need to delve into the analytics that drive Prebid performance. By using comprehensive tools like Assertive Yield's Intelligence platform,

publishers can gain the insights needed to make informed decisions and optimize their ad strategies.

By understanding the mechanics of Prebid and leveraging the advanced analytics offered by [holistic revenue analytics platforms](#), publishers can unlock new revenue streams and enhance the value of their ad inventory.
