

Traffic Shaping

Higher profitability with lower cost

Boost Profits, Cut Costs, and Go Green: Maximize Revenue, Minimize Carbon Emissions, and Strengthen DSP Relationships with Efficient Matchmaking!

Let's Talk!

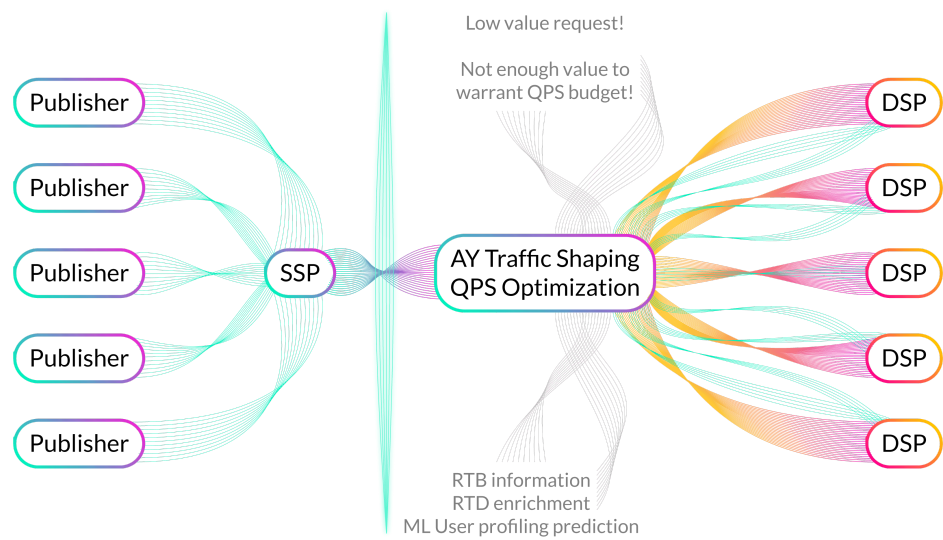

How do you change the game?

It's time to play an entirely new game with AY's unique QPS optimization solution. In today's world of increasing QPS limitations, random sampling to predict supply volume, blocking segments or bidders, FIFO real-time counters, – all these initiatives are unreasonably limiting your performance.

Old Game	New Game
✗ Digital waste: >95% of all bid requests	✓ ML User profiling prediction
✗ Low traffic quality = frustrated partners	✓ Higher profitability from DSPs thresholds
✗ QPS limits = lower profitability	✓ Lower traffic cost and greener programmatic chain

Smart Bid Request Optimization

Double or Triple your Performance

AY Traffic Shaping is ruled by cutting-edge machine learning training techniques, which optimizes supply-demand QPS limits by matching trillions of ad-requests to the right demand-partners in microseconds. Be a stronger player!

[Book a Call](#)

6 to
12%
FILL-RATE

Increase optimal QPS, traded value, wins rates, and infrastructure cost savings as a result of fewer requests to process

up to
40%
NET REVENUE

Wasteful requests are network requests that result in no significant value; for example no response, no bid, bid below operating cost

up to
60%
WASTEFUL REQUEST

Improves the quality of traffic resulting in higher overall bid rates and traded volume leading to more revenue and a significant reduction in the server cost

50 to
80%
REVENUE PRE-REQUEST

Improve the bid rate seen by the external bidders, selects monetizable requests to better utilize the QPS limits, improving ROI for all participants

Winning SSPs can now reach new heights of revenue

QPS Optimization

Let the AY Algorithm pick the best queries to be sent each second by setting the QPS threshold for each DSP and data center.

Better DSP relationships

Provide your DSP partners a singular experience and negotiate for higher QPS limits by only sending relevant and green traffic.

Traffic cost reduction

Free up server networking for more demand or decrease cloud expenses by removing bids below operational value.

Predictions with real-time user profiles

Create assertive users profiles in real-time, enabled by high accuracy AY Machine Learning predictions that match trillions of ad-requests in microseconds.

Green traffic

Collaborate to less carbon emissions, eliminating digital waste up to 60%: with a higher quality traffic and reduced traffic cost.

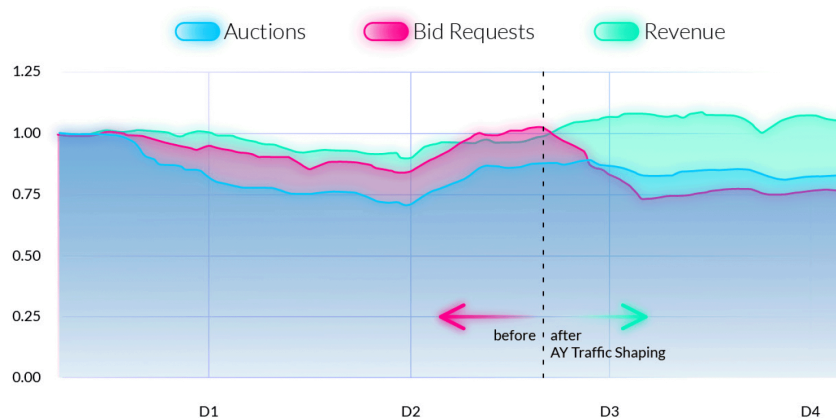

Go the extra mile

Reduce incoming queries as well by implementing our solution directly to publishers you work with.

Let's win this new game?

Let's Talk!

Optimize Your Traffic for Greater Profits

Incredibly high RPS: thousands per core

Low memory consumption: 400 MB + Fast response times: in microseconds

Overall 30% QPS on Average Reduction

"GumGum can now safely implement QPS thresholds based on a partner-by- partner needs, which is something that we weren't able to do before. So, that's probably one of the biggest things that we've been able to take away from our partnership with Assertive Yield"

Greener Traffic, Higher Profitability, Lower Cost
